## What causes TMJ pain?

The temporomandibular joint (TMJ) connects the lower jaw to the bones of the skull. A condition known as Temporomandibular Disorder (TMD) can cause pain and stiffness in the TMJ. When it is subjected to trauma such as an injury to the neck or head, or aggravated by clenching or teeth grinding, TMJ disorder (TMD) arises.

### SIGNS & SYMPTOMS

- ✦ Facial pain
- ✦ Earaches or ringing of the ears
- ✦ Dull, chronic headaches
- ✦ Jaw locking
- ✦ Clicking or popping sounds in the jaw joint
- ✦ A bite that feels uncomfortable or "off"
- ✦ Neck, shoulder and back pain
- ✦ Swelling on the side of the face

## Get your pain under control

### THE FAST & EFFECTIVE SOLUTION

The Epic™ works as a therapeutic device that helps to temporarily increase your blood circulation as well as to temporarily relax your muscles. The Epic is then able to temporarily relieve joint pain and stiffness. Treatment takes approximately 5-10 minutes for each area, so it's fast and convenient for people with busy schedules. Patients can come in for additional treatments as needed by your healthcare provider.

### THE RIGHT CHOICE

Between 5-12% of people in the United States experience pain associated with TMJ disorder<sup>1</sup>. Until recently, it was typically treated with injections, physical therapy, night guards, and anti-inflammatory medications that could have side effects when used over long periods of time.

Now there is an effective therapy with the use of Epic laser technology. Epic pain therapy gives you a reason to smile.
